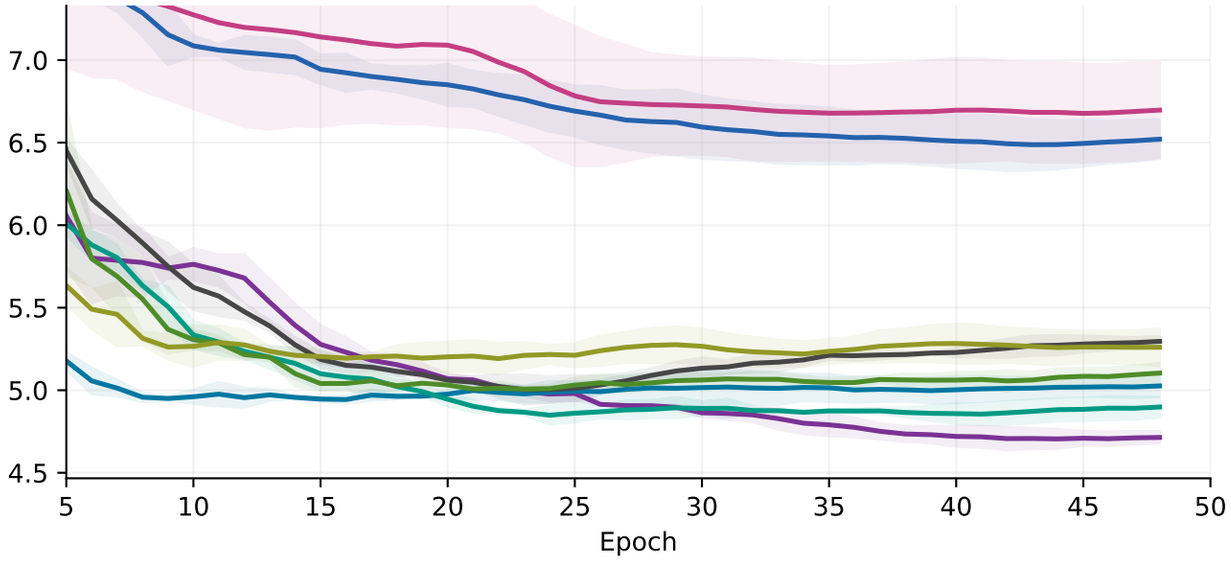
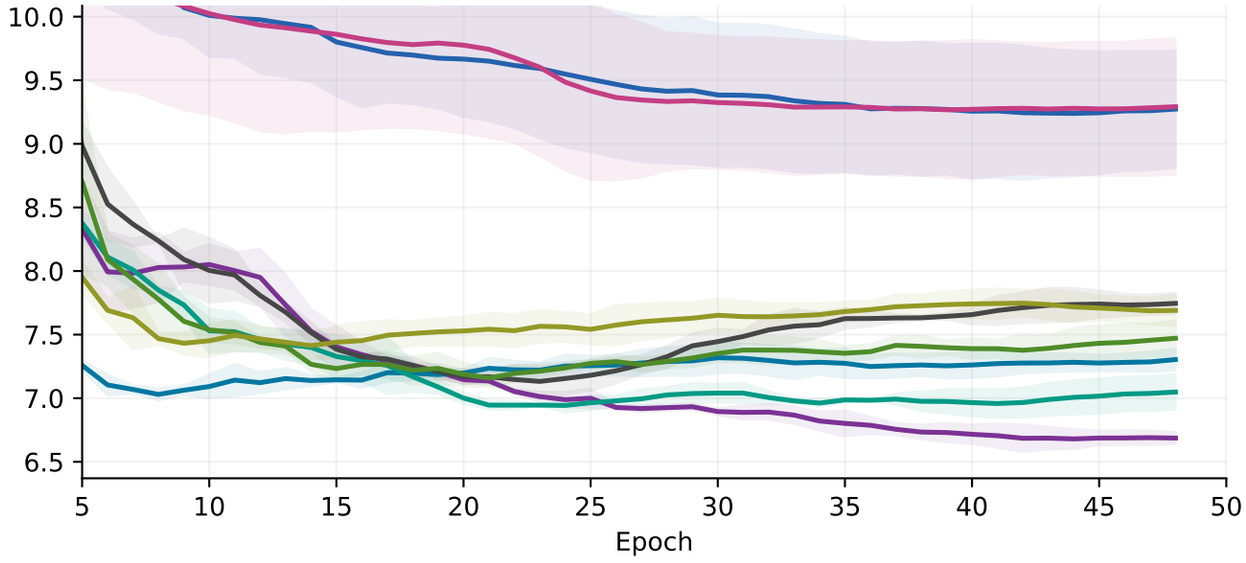
Full data: eight-method comparison

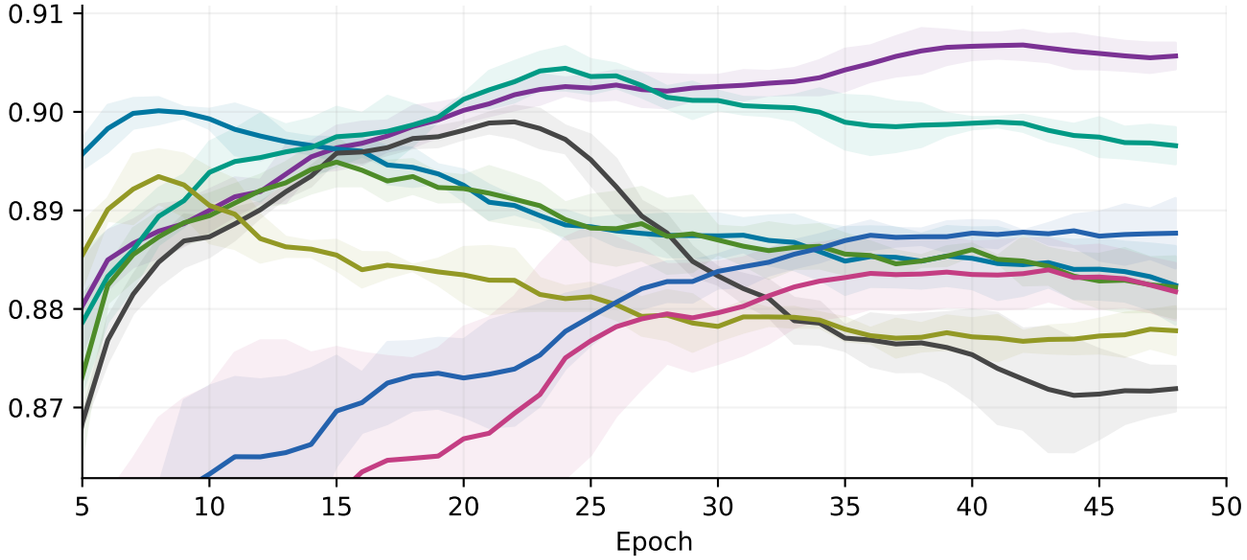
Validation mean-age MAE (years)



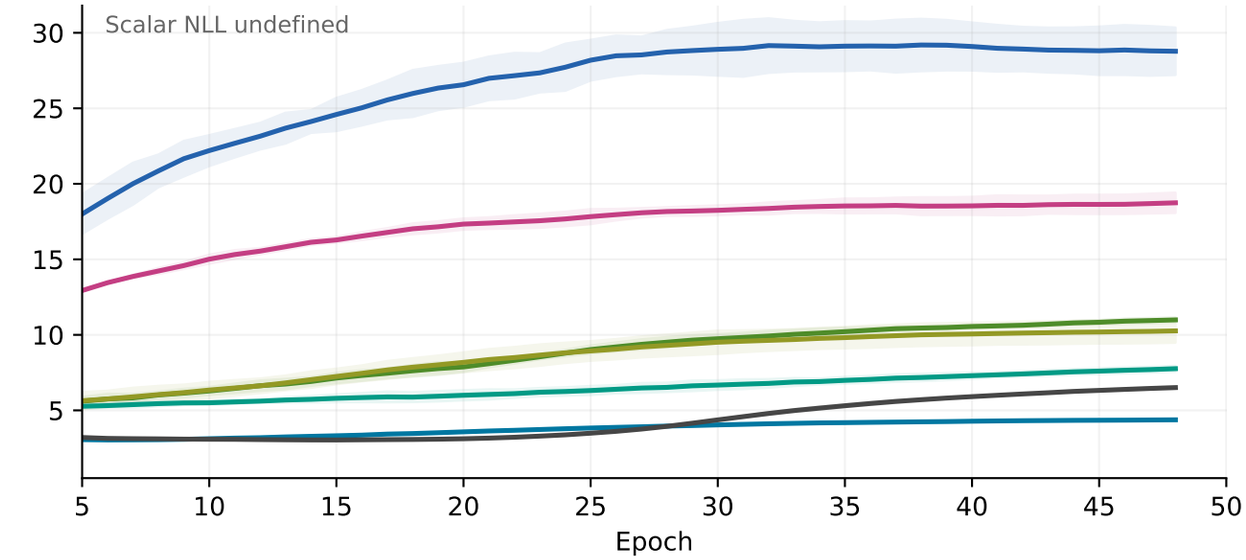
Validation mean-age RMSE (years)



Validation median Spearman (higher is better)



Validation label NLL (nats)



Scalar MAE
TailRL (population)
TailRL (64 samples)
CE
Stat MAE, w=2 (population)
Stat MSE, w=2 (population)
GRPO MAE (64 samples)
RLOO MAE (population)

18,462 images × 50 epochs; three matched seeds. GRPO/RLOO configurations were selected by mean best validation MAE, without test outcomes. Moving means: 5 epochs (10 for 200-epoch runs); bands: between-seed sample SD where n=3. Axes emphasize later fit; interactive viewer can show the full trajectories.
