UTKFace head comparison: one matched optimization seed (42)
50 full-data epochs; dots on curves identify validation-MAE-selected checkpoints
MAE categorical (best e40)
MAE scalar (best e41)
Validation mean-age MAE (years; lower is better)
Epoch
Validation Spearman (higher is better)
Epoch
MAE scalar (best e41)
MAE categorical (best e40)
4.611
4.675
Clean test MAE at selected checkpoint (years)
