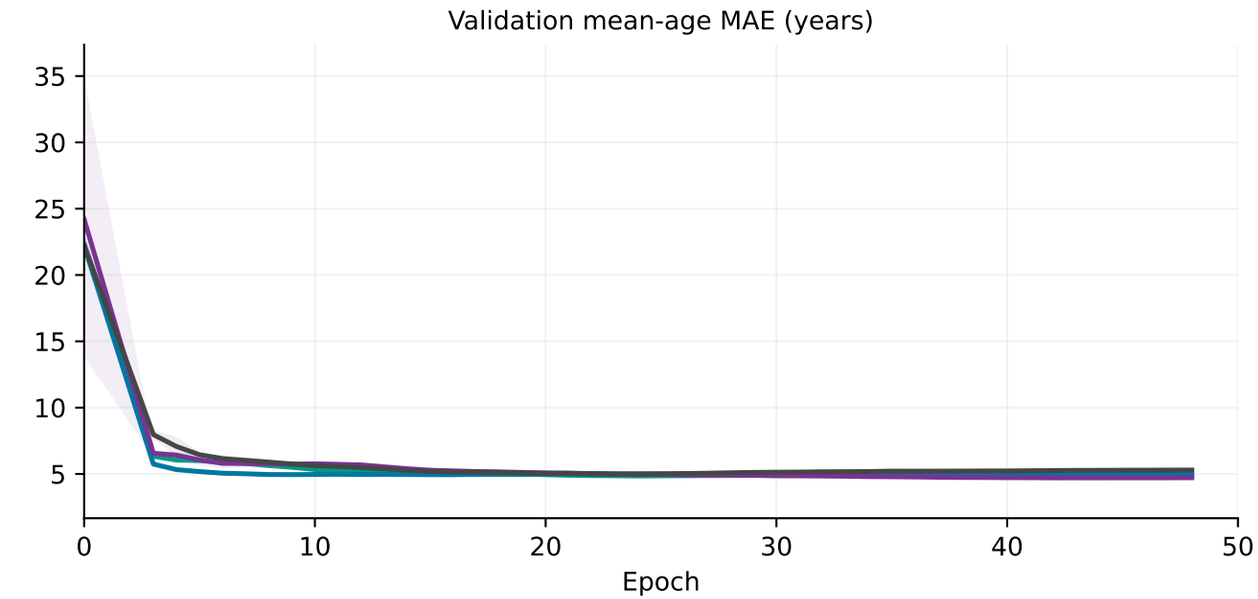
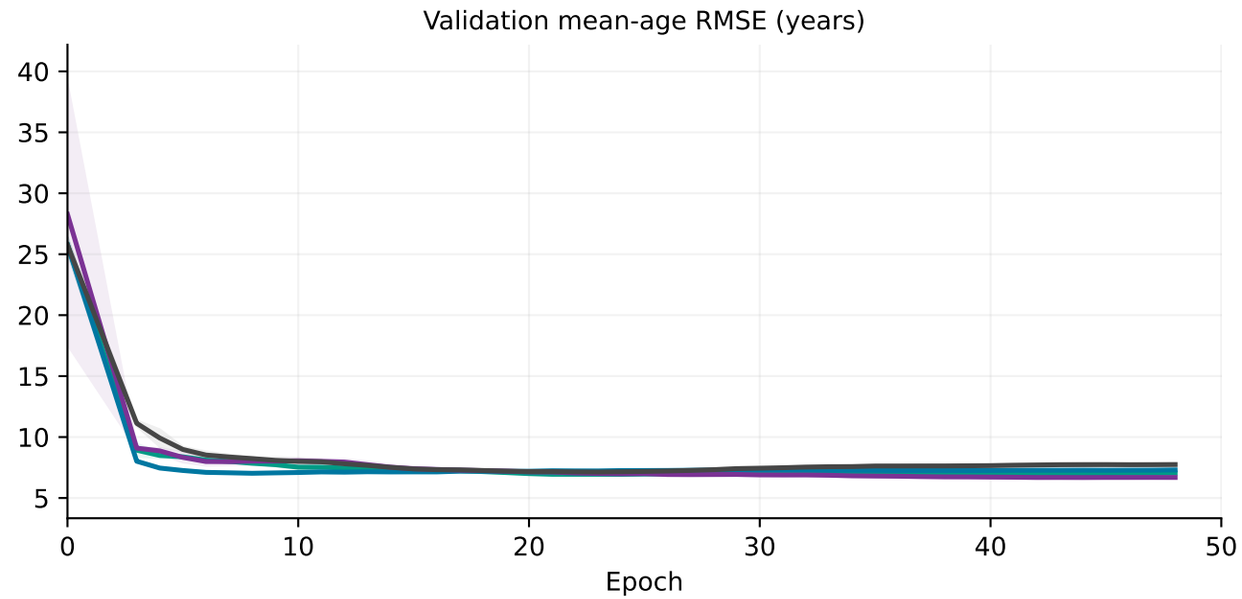
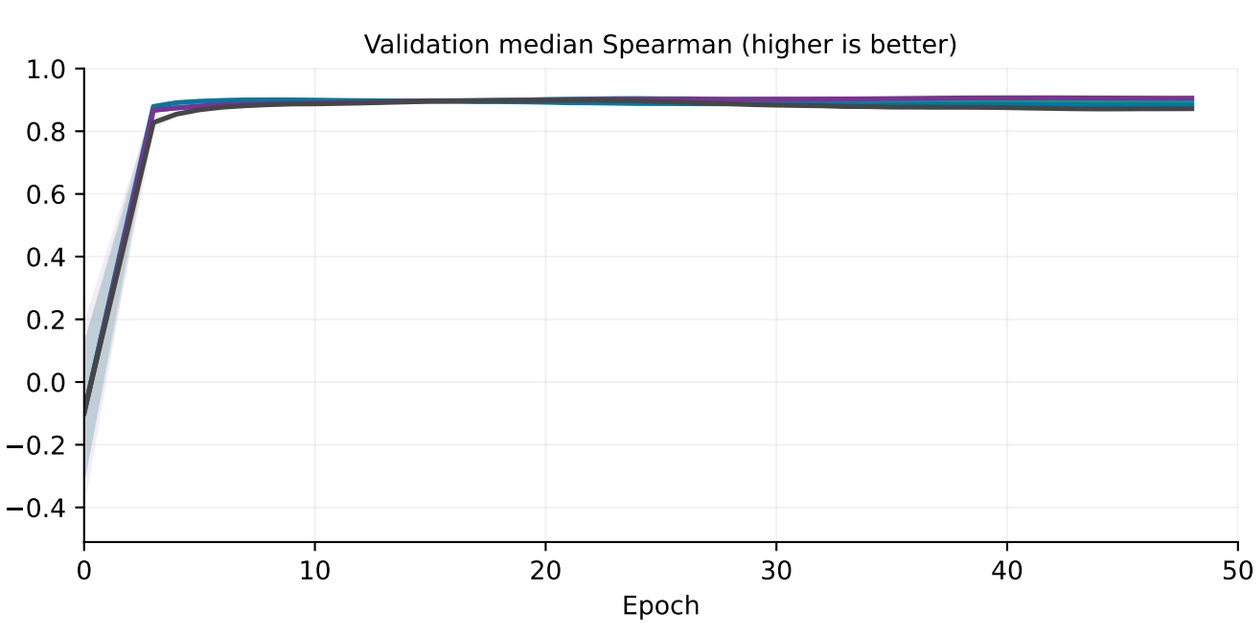
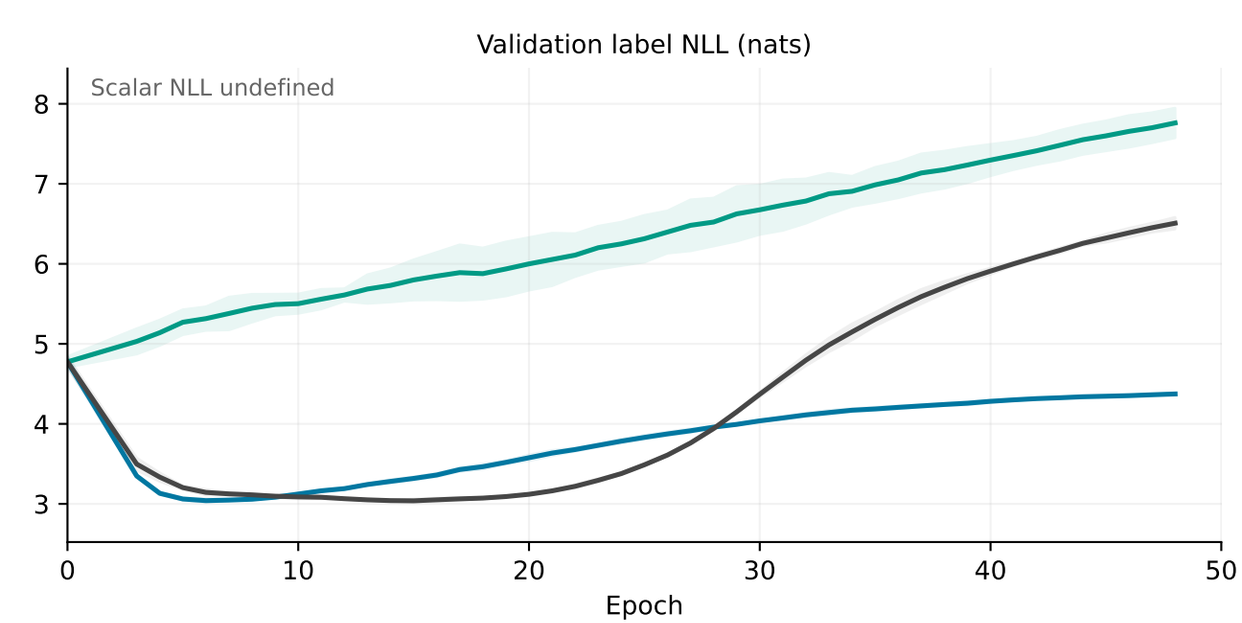
TailRL and supervised baselines









TailRL (64 samples)
TailRL (population)
Scalar MAE
CE

Full data × 50 epochs, three matched seeds: sampled TailRL, population TailRL, scalar MAE and CE. TailRL peak LR: population 0.0001; 64 samples 0.001. Rates are independently validation-selected. Moving means: 5 epochs (10 for 200-epoch runs); bands: between-seed sample SD where n=3. Use the interactive viewer to zoom into later training.
