1024 images × 200 epochs: eight tested methods

Seed 42. Adapted to the eight completed categorical settings: categorical MAE/MSE and both population GRPO rewards replace the unrun scalar, sampled-TailRL and RLOO settings. Moving means: 5 epochs (10 for 200-epoch runs); bands: between-seed sample SD where n=3. Axes emphasize later fit; the interactive viewer can show full training trajectories.
