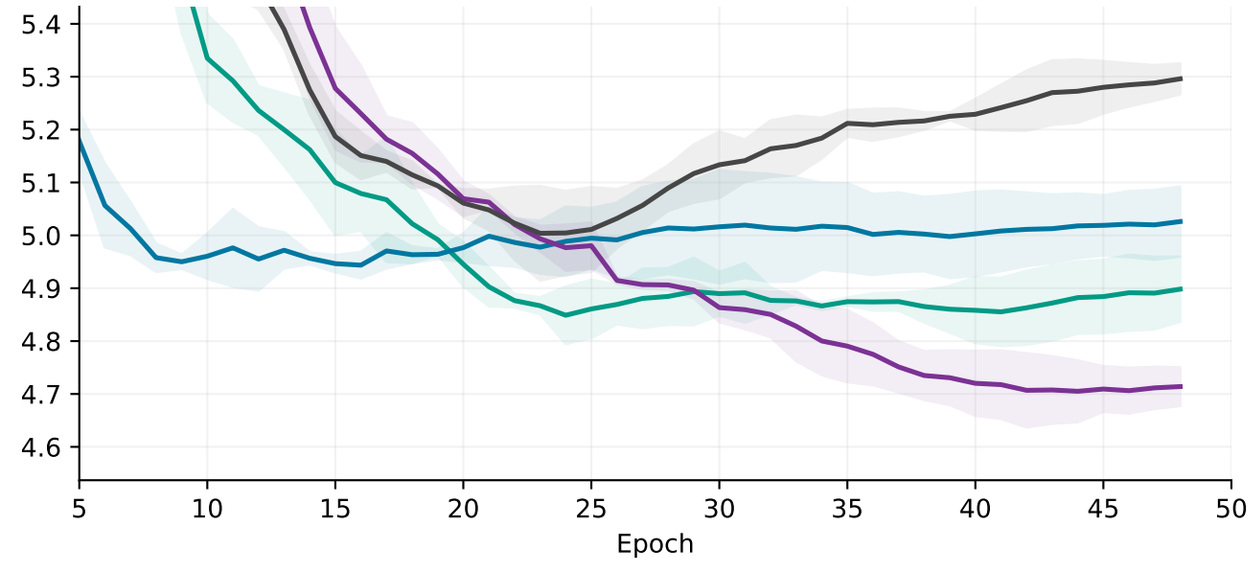
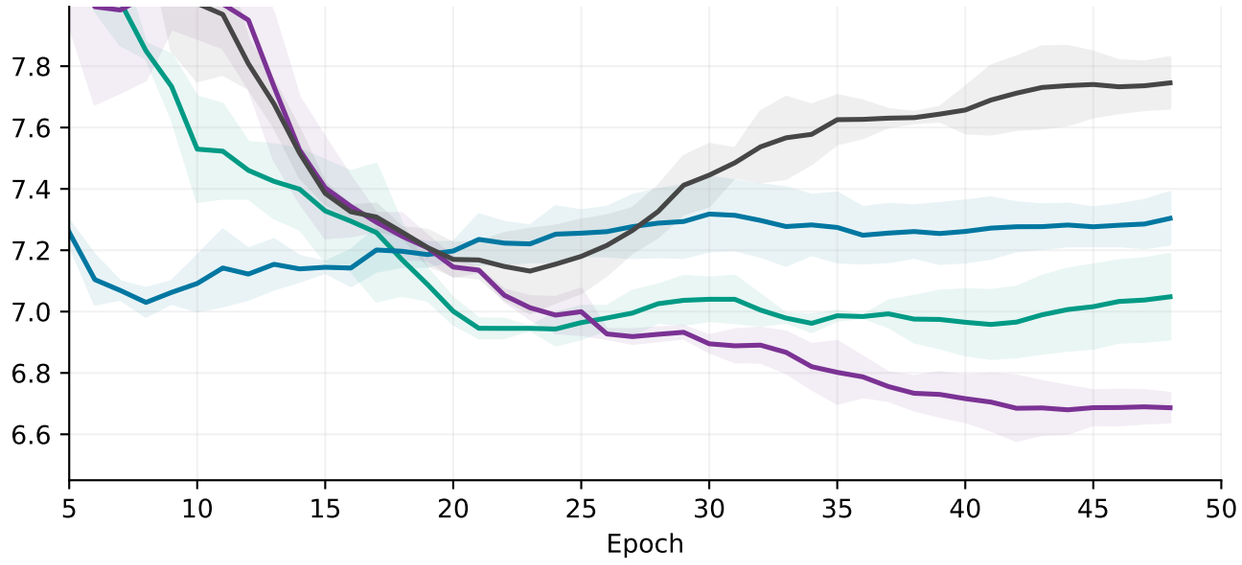
TailRL and supervised baselines

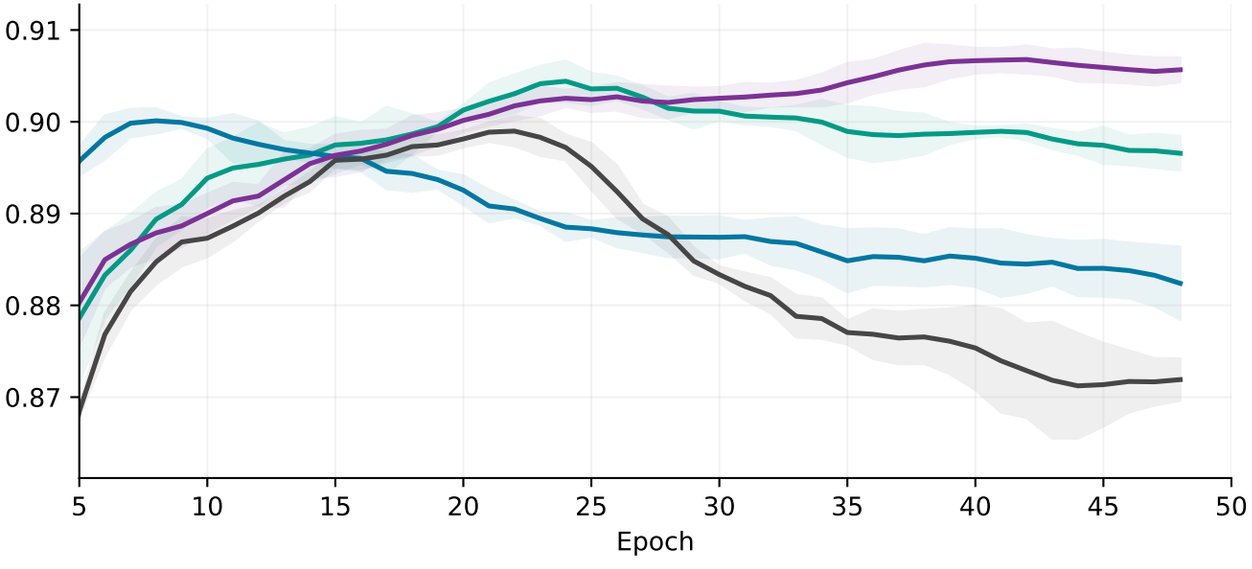
Validation mean-age MAE (years)



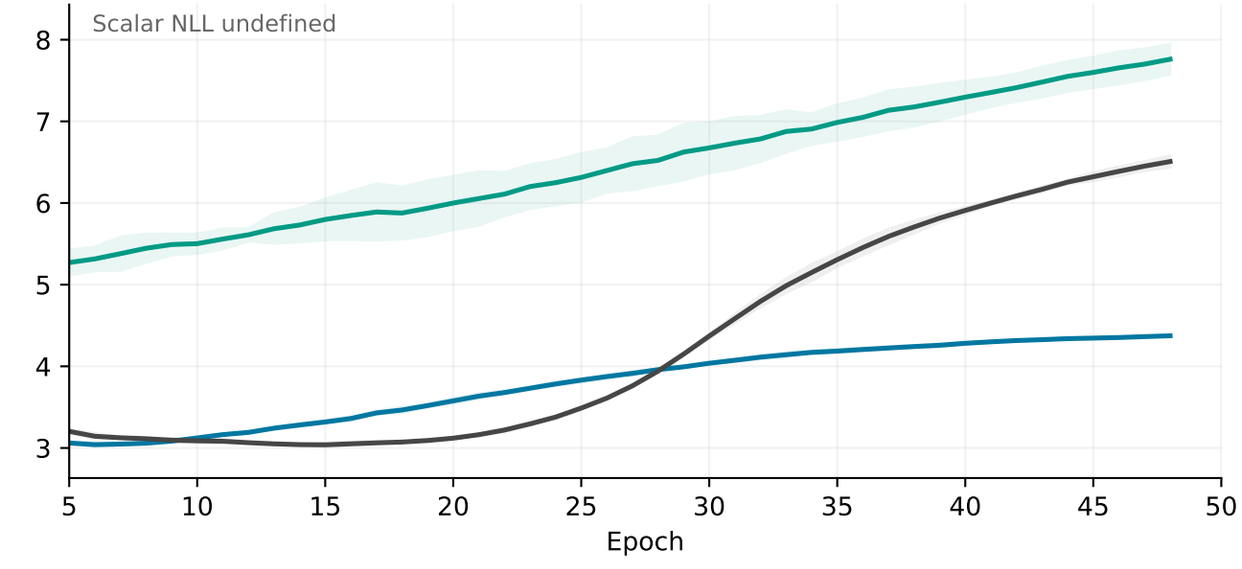
Validation mean-age RMSE (years)



Validation median Spearman (higher is better)



Validation label NLL (nats)



TailRL (64 samples)
TailRL (population)
Scalar MAE
CE

Full data × 50 epochs, three matched seeds: sampled TailRL, population TailRL, scalar MAE and CE. TailRL peak LR: population 0.0001; 64 samples 0.001. Rates are independently validation-selected. Moving means: 5 epochs (10 for 200-epoch runs); bands: between-seed sample SD where n=3. Axes emphasize later fit; the interactive viewer can show full training trajectories.
